

Make Your Warehouse Smarter.

The inVia Logic software suite is the brains of our system.

It calculates the most efficient movement of goods through your warehouse and equips you with simple user tools that help streamline your daily operations.

We configure a system specifically designed for your warehouse, factoring in your existing infrastructure and processes. The result is optimization of both the storage and movement of your inventory that delivers higher fulfillment throughput and greater order accuracy.

inVia's Turnkey Automation Solution

INVIA LOGIC
AI-Driven Software

INVIA PICKMATE
Simple Mobile Tools

INVIA PICKER
Robotic Automation

ROC
Remote Operations

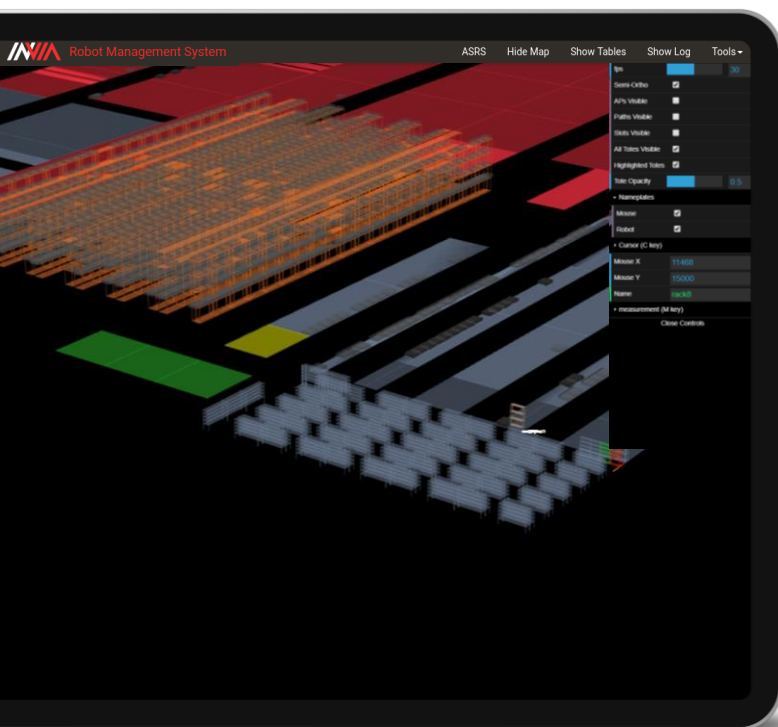

Our subscription-based system isn't just hardware, software, or remote oversight. It's all of the above, working together seamlessly to optimize your operations. Nimble robots, powerful AI-driven optimization software, and 24/7 proactive monitoring all dramatically increase productivity.

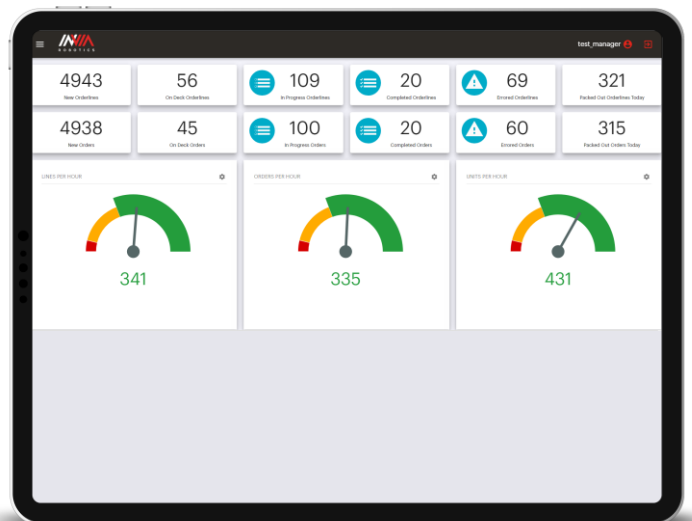

inVia Logic features:

- **Ideal density** - Our warehouse analysis will uncover wasted space and dynamically identify optimal SKU location based on order patterns.
- **Workflow layout** - Our assessment will prescribe the optimal paths for moving goods quickly and accurately through each step of the fulfillment process.
- **Simplified data transfer** - inVia Connect establishes a direct portal into your WMS so fields are automatically aligned and order data flows through the system without friction or delays.

- **Labor direction & management** - Our inVia PickMate tool provides intuitive, simple visuals to guide your people to quickly and accurately pick and sort goods into orders.
- **AI-driven decisions** - Our software is continuously learning, identifying, and implementing changes in workflows that can elicit even greater efficiencies for your business.
- **Business intelligence** - Our dashboards give you easy access to real-time data on fulfillment progress at the warehouse level, as well as detailed views into order status down to the order line level.
